

AI RESEARCH TASK

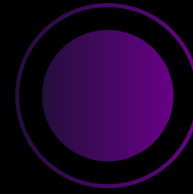

By: Kashish Patel

AI INTERN

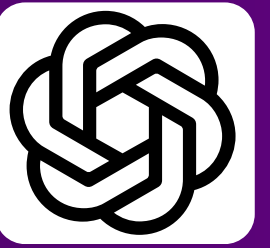

GenAI

- GenAI creates text, images, videos, music, and code automatically.
- Popular tools include ChatGPT, Gemini and Midjourney.
- Businesses use GenAI for content creation, coding assistance, and customer support.

Real World Use Case

- AI Content writing
- AI image generation
- AI coding assistant

Statistics

- Private investment in Generative AI reached \$33.9 billion globally in 2024.

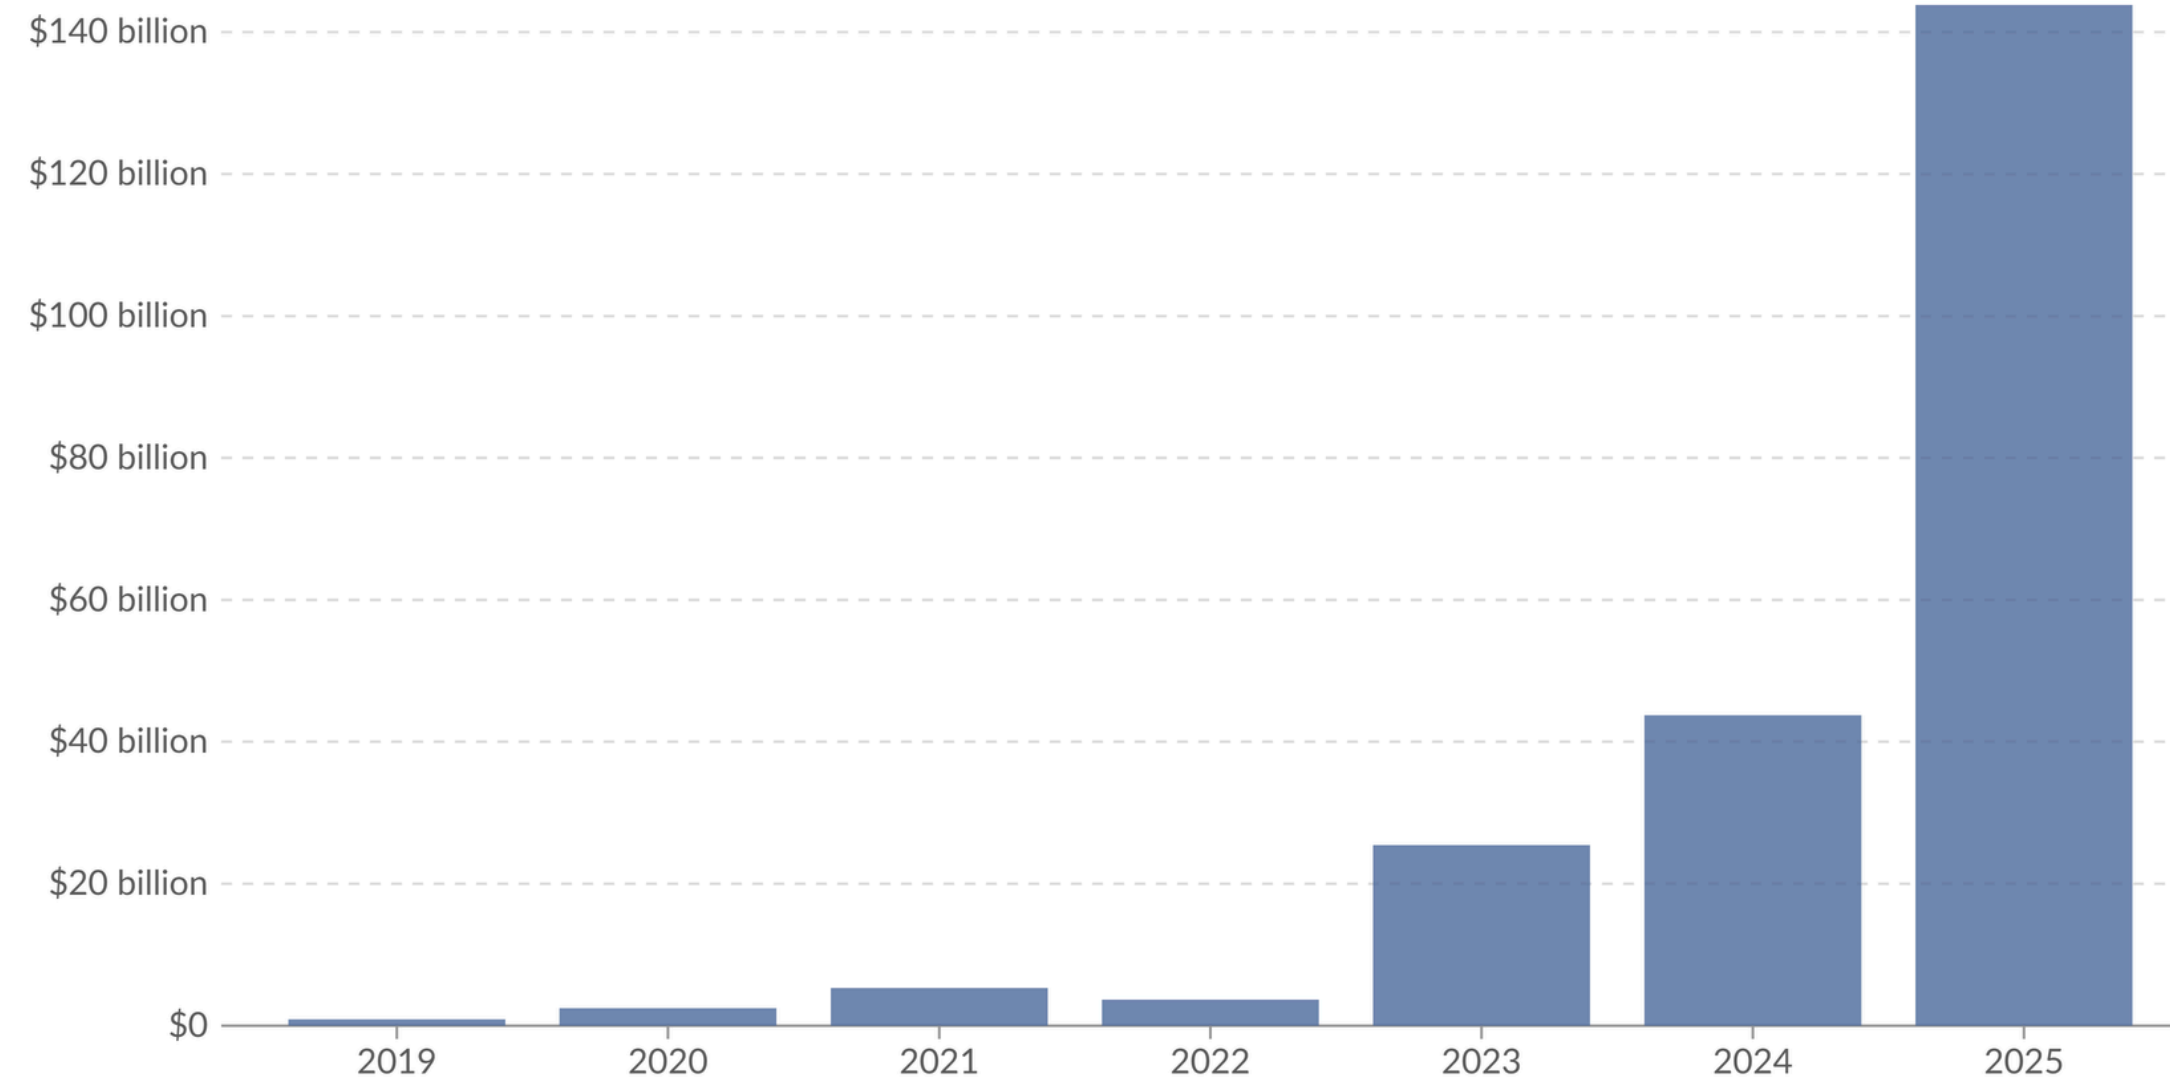

Statistics

External funding for privately held generative AI companies

Our World
in Data

Money put into privately held generative AI¹ companies by private investors. This excludes publicly traded companies (e.g., Big Tech companies) and companies' internal spending, such as R&D or infrastructure. Expressed in US dollars, adjusted for inflation.

Data source: Quid via AI Index Report (2026); U.S. Bureau of Labor Statistics (2026)

OurWorldinData.org/artificial-intelligence | CC BY

Note: This data is expressed in constant 2021 US\$. Inflation adjustment is based on the US Consumer Price Index (CPI).

Generative AI funding increased rapidly between 2023–2025, showing strong industry adoption.

Large Language Models (LLMs)

- LLMs are advanced AI models trained on massive text datasets.
- They understand and generate human-like language.
- Examples include GPT-4, Claude, Gemini, and Llama

Real World Use Case

- Customer support chatbot
- AI tutors
- Email and report generation

78% of organizations used AI tools in 2024.

AI Agents

- AI Agents can plan, reason, and complete tasks automatically.
- They combine AI models with automation tools and memory.
- AI agents help businesses reduce manual work and improve efficiency.
- Companies are integrating AI agents into workflow and software development.

Real World Use Case

- Automated scheduling assistants.
- AI email responders
- Ai coding assistants

AI agent adoption is expected to grow rapidly by 2030.

Computer Vision

- Computer Vision enables AI to understand images and videos.
- Used in facial recognition, healthcare, and self-driving cars.
- AI-powered cameras improve security and surveillance systems

Real-World Use Case

- Medical image analysis
- Face detection systems
- Autonomous vehicles
- Security surveillance

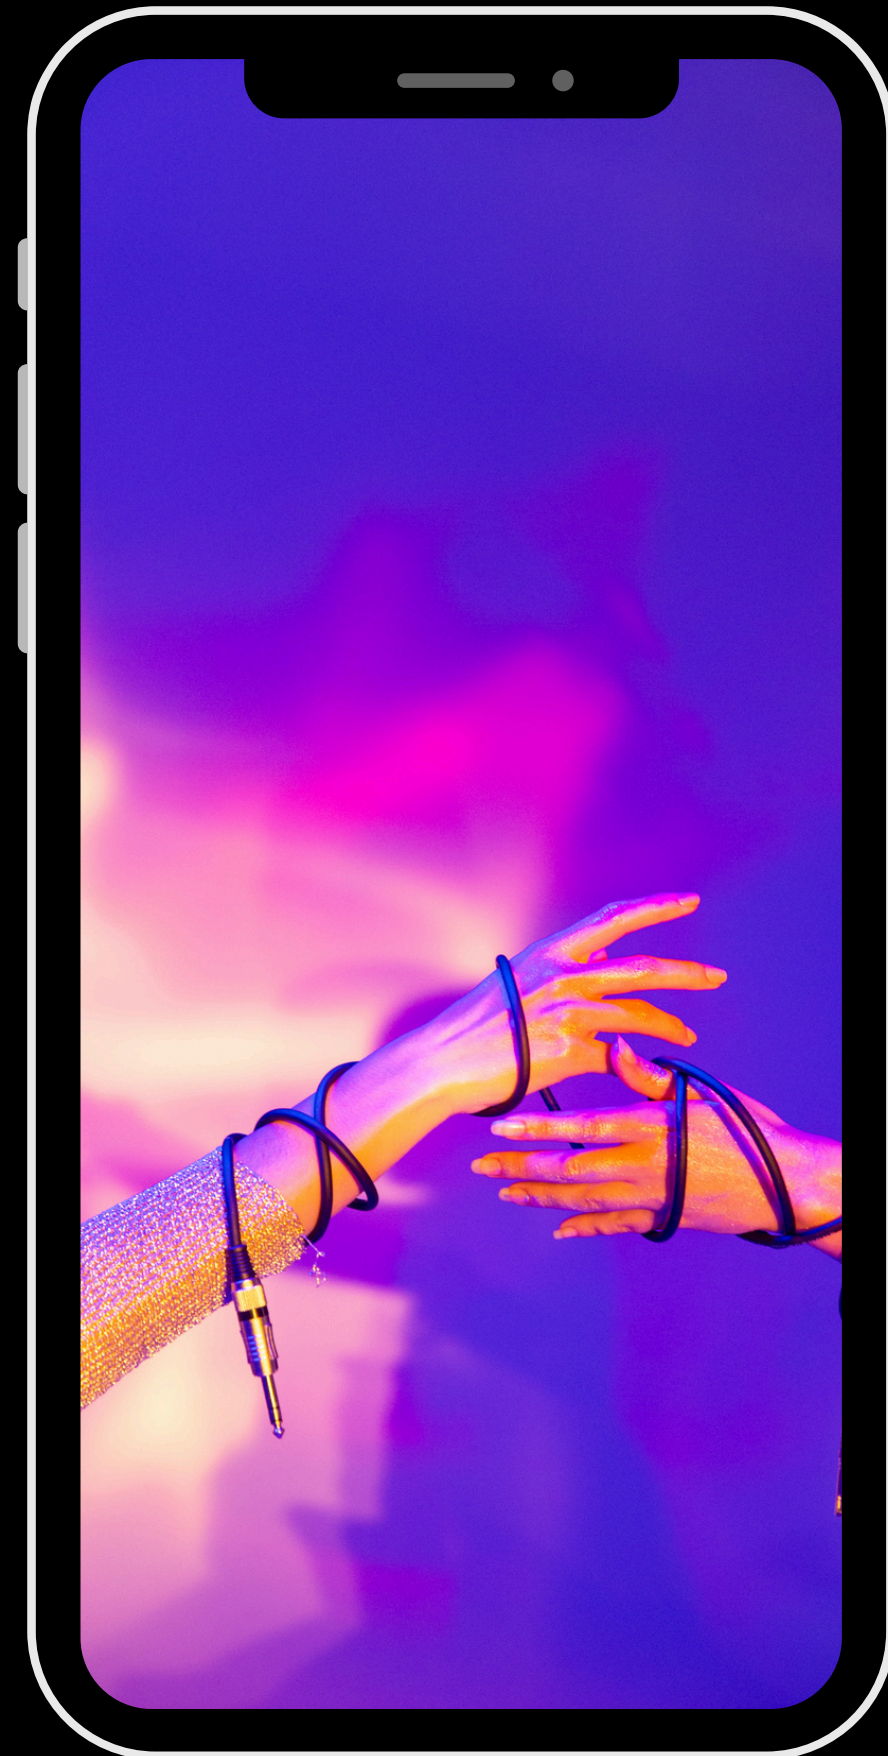

Computer Vision market size is expected to grow rapidly in healthcare and autonomous vehicles.

AI Ethics

- AI ethics focuses on fairness, privacy, and responsible AI usage.
- Concerns include AI bias, misinformation, and data privacy.
- Governments and organizations are creating AI regulations and guidelines

Real World Use Cases

- AI transparency policies
- Ethical AI development
- Privacy protection systems
